Introduction	1
Chapter 1: Networking and Sockets	5
The OSI Model	6
Routing	11
Reserved IP Addresses	18
The UDP Protocol	19
The TCP Protocol	25
Non-Blocking I/O	29
The ICMP Protocol	32
Sending to a Broadcast Address	39
Unix Domain Sockets	43
Conclusion	45
Chapter 2: Binary Protocols	47
The Basics	47
Hacking a Network Protocol	55
Conclusion	120
Chapter 3: Character Encoding	121
The Basics	121
Unicode and UTF-8	133
Conclusion	154

Chapter 4: Streams	155
Configuration	156
Stream Contexts	160
Building Your Own Stream Handler	168
Conclusion	200
Chapter 5: SPL	201
Why SPL?	201
SPL Basics	202
Conclusion	215
Chapter 6: Asynchronous Operations with Some Encryption Thrown In	217
Application Overview	217
Setting Up the Message Queue	220
Handling the Credit Card Processing	232
Encrypting the Data	235
Constructing the Back End	238
Testing It Out	242
Conclusion	244
Chapter 7: Structured File Access	245
Tar Files	246
WAV Files	253
Ext2	259
Writing Your Own	286
Conclusion	318
Chapter 8: Daemons	321
Starting Out	323
Our Example	326
Inter-Process Communication	344
Conclusion	347
Chapter 9: Debugging, Profiling, and Good Development	349
Debugging	353
Profiling	359
Code Tracing	363

Unit Testing	366
System-Level Diagnostics	375
Conclusion	389
Chapter 10: Preparing for Success	391
Expect Failure	392
Partition Your Data	393
Calculate Before Writing	394
Process Asynchronously	396
Don't Poll	396
Use Ajax	397
Remove Single Points of Failure	397
Max Out Your Memory	400
Above All, Don't Panic	400
Index	403
